

# ADMINISTRATIVE TASK & WORKFLOW SYSTEM

## Prepared for BrightPath Consulting

Prepared by Evangeline Amadi • Evy Data Entry Services • November 2026

### PURPOSE

This document outlines the administrative task and workflow system set up to manage BrightPath Consulting's day-to-day operations – client communication, financial admin, records, and reporting. It defines how tasks move from intake to completion, who owns each stage, and how progress is tracked and reported week to week.

### 1. TASK CATEGORIES & OWNERSHIP

Recurring administrative work is grouped into four categories, each with a defined owner and turnaround expectation.

| Category             | Examples                                         | Owner / Turnaround      |
|----------------------|--------------------------------------------------|-------------------------|
| Client Communication | Inbox triage, meeting scheduling, follow-ups     | VA – same business day  |
| Financial Admin      | Invoicing, bank reconciliation, expense tracking | VA – weekly cycle       |
| Records & Data Entry | Client database updates, document filing         | VA – 48 hour turnaround |
| Reporting            | Weekly status summary, task tracker update       | VA – every Friday       |

### 2. WORKFLOW STAGES

Every task – regardless of category – moves through the same five stages, giving both the client and VA a shared, predictable view of where things stand.

| Stage          | What Happens Here                                                        | Owner           |
|----------------|--------------------------------------------------------------------------|-----------------|
| 1. Intake      | New task logged in tracker with description, priority, and due date      | Client or VA    |
| 2. In Progress | Task actively being worked on; status updated if blocked or delayed      | VA              |
| 3. Review      | Completed work checked for accuracy before being marked done             | VA (self-check) |
| 4. Completed   | Task closed out and logged in the weekly report                          | VA              |
| 5. Archived    | Records filed for future reference; recurring tasks reset for next cycle | VA              |

### 3. WEEKLY TASK TRACKER (SAMPLE WEEK)

A live version of this tracker is maintained in a shared Google Sheet / Trello board, updated daily. Below is a snapshot from a working week.

| Task                                   | Category             | Owner | Due Date | Status      |
|----------------------------------------|----------------------|-------|----------|-------------|
| Reconcile October bank statement       | Financial Admin      | VA    | Nov 3    | Completed   |
| Send Q4 client invoices                | Financial Admin      | VA    | Nov 4    | Completed   |
| Update client contact database         | Records & Data Entry | VA    | Nov 5    | In Progress |
| Draft weekly status report             | Reporting            | VA    | Nov 7    | In Progress |
| Schedule Q1 planning call              | Client Communication | VA    | Nov 6    | Completed   |
| File signed vendor contracts           | Records & Data Entry | VA    | Nov 6    | Review      |
| Follow up on outstanding invoice #1042 | Financial Admin      | VA    | Nov 7    | In Progress |

### 4. STANDARD OPERATING PROCEDURE – WEEKLY INVOICE PROCESSING

A recurring task, documented step by step so it runs the same way every time, regardless of volume or who picks it up.

1. Pull the list of completed client engagements from the tracker.

2. Generate invoices in the accounting system, matching agreed rates and terms.
3. Cross-check each invoice against the signed scope of work before sending.
4. Send invoices to clients with a standard cover note, CC'ing the accounts inbox.
5. Log each sent invoice in the tracker with due date and status "Awaiting Payment."
6. Flag any invoice unpaid after 7 days for follow-up.

## 5. COMMUNICATION & ESCALATION PROTOCOL

---

- Routine updates: shared in the weekly status report every Friday.
- Time-sensitive items: flagged directly via WhatsApp/email within the same business day.
- Blocked or overdue tasks: escalated immediately with a clear reason and proposed next step, not left to surface in the weekly report.
- All client-facing communication is reviewed for tone and accuracy before sending.

## 6. REPORTING CADENCE

---

- Daily: task tracker kept current in real time.
- Weekly: status summary sent every Friday – completed tasks, in-progress items, and anything needing client input.
- Monthly: financial admin summary (invoices sent, payments received, outstanding balances).
